

# 5 SWIMMING POOL ACCESSORIES YOU NEED TO HAVE

<https://allstarpoolparts.com.au/>

# 1. SOLAR BLANKETS AND SOLAR ROLLERS

A solar blanket is a great pool accessory as it will ensure your pool is ready for use by keeping the water protected from any rain or other debris. A solar blanket will also help keep your pool heated by retaining the heat from the sun and reducing evaporation.

By harnessing the power of the sun and preventing your pool water levels from dropping, a solar blanket can save you a good amount of money on energy and water costs.

## 2. WATER TEST STRIPS AND TEST KITS

Water testing is an important part of your pool maintenance routine and we recommend that you test your water at least once a week. This will help you keep an eye on the chemical levels in your pool so you can avoid any nasty bacteria or algae growth.

You can stock up on test strips if you're looking for a solution that's quick and easy to use.

### 3. MANUAL VACUUM

A manual vacuum can be the perfect solution if your pool is ever experiencing an algae infestation. Algae needs to be brushed before it can be vacuumed out of your pool and a manual vacuum is a two-in-one vacuum and brush so you can get the job done quickly.

Many vacuum cleaner heads are compact and give you more control when you are cleaning your pool. Automatic vacuums can save time and effort, but they might miss hard-to-reach spots in your pool.

## 4. SKIMMER OR LEAF NET

Skimmer nets are essential accessories, especially if you have any plants or trees near your pool. Flowers and trees from your garden will result in petals and leaves in your pool and on a windy day you can expect a higher volume of debris getting into the pool if you don't have a pool cover. Not to mention those pesky little bugs that land in your pool and can't get out!

## 5. BACKWASH HOSE

Having a backwash hose is useful for cleaning your swimming pool filter without having to do it manually. The process of backwashing reverses the flow of water which flushes out any contaminants from your pool filter, making it easier for you to remove any trapped debris.

You will know you have to backwash your pool when your pressure gauge reads at 10 pounds per square inch above normal operating levels.
